

# OpenGraph Lite Viewer EN v4511

## LOG order warning labels: OSV-!, VSO-!, VOS-!

Version v4511 marks VSO and VOS in the same way as OSV. The labels are now OSV-!, VSO-! and VOS-!.

### Meaning of the exclamation mark

- The exclamation mark does not change the existing tree or flip behaviour.
- It marks a LOG order that cannot be produced as a base alternative by the box approach.
- Correct rendering on the LEX axis requires an explicit movement rule.
- SOV, SVO and OVS remain unmarked layout variants.
- Dutch sample sentences and language data remain unchanged.

### Updated UI text

The LOG order button now cycles: SOV, SVO, OVS, OSV-!, VSO-!, VOS-!. When a marked order is selected, the warning text states that box layout cannot produce that order and that a LEX movement rule is required.

### Scope of the change

Only labels, tooltips, explanations and documentation were changed. The existing layout algorithms and flips for all orders remain untouched.
