

OpenGraph Lite Viewer - English version v4499

First maintained English-language documentation for the OpenGraph Lite Viewer. Dutch-specific linguistic material remains unchanged: example sentences such as HOND BIJT MAN, VROUW HEEFT TRUI GEBREID and OMDAT HOND MAN BIJT are test material and remain Dutch.

Interface language

Use the English button in the top bar to switch the visible interface and help text. In English mode the button changes to Nederlands. This first version translates the main viewer labels, the main status/help texts and the Help carousel.

Main view

The main view is kept minimal: a sentence selector, Help, Config, language toggle and the projection grid. All detailed controls stay in Config or in the in-window projection control strip.

- All: shows central tree plus LEX, SYNTAX and LOGICAL axes.
- Source: shows the selected OPN source tree.
- LEX: shows the LEX axis and placement rules.
- SYN: shows the syntax projection.
- LOG/FT: shows the logical or functional projection.

JAN Open Notation

JAN is the open notation layer used here for language trees. The central tree contains freely placed nodes and branches. Word order and other readings are projected onto separate axes rather than forced into a single traditional downward tree.

Axes

- LEX - west axis: surface order and local placement rules.
- SYNTAX - east axis: syntax rules projected at source-node height.
- LOGICAL / FT - south axis: logical or functional order.

LEX placement rules

For main clauses, the LEX axis shows local exchanges. The first phrase can move to slot 1 and the finite verb to slot 2. Old base positions remain visible as traces. Insertions such as VANDAAG are represented as insertion boxes on the LEX axis, not as direct new nodes in the central tree.

Carousel

The project spelling is carousel. The carousel is a separate help module. It can run inside the Help screen or as a standalone folder extracted from the project zip.

Standalone module paths:

```
carousel/index.html
carousel/index-en.html
carousel/README.md
carousel/carousel.css
carousel/carousel.js
carousel/slides.json
carousel/slides/
```

Maintenance rule

From v4499 onward, when an English release is requested, the English UI/help/docs should be updated together with the Dutch implementation. Dutch example sentences and Dutch-specific syntactic test data remain unchanged unless explicitly requested.
