

OpenGraph Lite Viewer - English documentation v4500

This is the maintained English version of the OpenGraph Lite Viewer documentation. Dutch linguistic material such as HOND BIJT MAN and OMDAT HOND MAN BIJT remains unchanged.

Language switch

The interface button now states the current UI language explicitly: UI: English or Taal: Nederlands. It switches the visible UI, help text, configuration labels and the Help carousel between Dutch and English.

Configuration screen

- Projection settings: central OPN, tree choice, layout order, branch order, view/window settings.
- LEX settings: utterance-type rule, LEX free slots, insertion position and insertion content.
- Branch extension settings: VP boundary, S boundary, object branch, verb branch, subject branch, ARG-STRUCT boundary and CLAUSE boundary.
- Mobile configuration: projection, actions, menus above grid, LEX free slots and documentation links.
- Option labels in select boxes are translated when English UI is active.

Carousel module

The project spelling is carousel. The carousel lives in its own folder and can run as a standalone folder. Use `carousel/index.html` for Dutch and `carousel/index-en.html` for English.

Maintaining future versions

When the user requests a new English version, update the English UI, configuration translations, Help carousel and PDF documentation together. Dutch sample sentences and Dutch-specific syntactic examples remain unchanged unless explicitly requested.
